Issue 1.4

Thank you for purchasing your new greenhouse. We recommend you familiarise yourself with the instructions and read all safety information before you commence assembly.

These instructions are divided into sections; **B**-base, **partlists**, **1-12'** side, **2**-porch handed sides, **3**-front gable, **4**-plain gables, **5**-joining eight side sections together, **6**-roof, **7**-vents, **8**-doors, **9**-glazing(9a toughened glass), **10**-vent attachment, **11**-door attachment, **12** anchoring down, **back cover**-packing list. If you need to contact us for assistance please refer to the relevant section/s.

Safety Warning

- Glass and aluminium can potentially cause injury. Please ensure you wear protective goggles, gloves, headgear and suitable footwear when assembling and glazing the building.
- Please remember that glass is fragile and should be handled with extreme care. Always clear up and dispose of any breakages immediately.
- Do not assemble the greenhouse in high winds.
- For safety reasons and ease of assembly, we recommend that this greenhouse is assembled by a minimum of two people.
- Please clear all lying snow from the greenhouse roof as it can cause the roof to buckle or collapse.

Site Preparation

- When selecting a site for your greenhouse, it is vital that you choose as flat and level an area as possible.
- A concrete or slabbed base will provide the most solid foundation for your greenhouse.
- **IMPORTANT:** Do **not** fix your building down until the building is fully assembled, including glazing.
- Avoid placing your greenhouse under trees or in other vulnerable locations.
- To minimise the risk of wind damage, try to select as sheltered a site as possible, e.g. beside a hedgerow or garden fence.

Additional Considerations

- Please bear in mind that assembling your greenhouse can be time consuming. You may need to spread the construction over two or more days. We recommend that you avoid leaving the building partially glazed. If you ever have to leave your greenhouse half assembled and not anchored down, weigh it down with slabs or bags of sand to stop the wind moving it.
- You will find it helpful to prepare a large, clean and clear area in which to work in. A garage floor or flat lawn area is ideal.
- If you have arranged for someone to install your greenhouse for you, please check that all components are included. Most parts are numbered and can be identified by a stamp or removable label. Alternatively, the components can be identified by lengths detailed in the packing list (see diagram below).
- Anchoring down your greenhouse should be the final stage of construction (including glazing).
- Once installed your greenhouse requires little maintenance, but to maintain the smooth running of your door(s) WD40 or similar can be applied to the door wheels and lower door guides.

Guarantee

- Your new greenhouse is guaranteed for 10 years against faulty manufacture of the framework. This does not include glazing, moving parts, accidental damage or wind damage.

Assembly diagram for step 2, showing the connection of the roof ridge to the side wall and end wall. The diagram includes a main view of the greenhouse frame and two detailed insets showing the roof ridge assembly.

Left Inset (Side Wall Connection):

- 1 screw (10)
- 1 nut (10)
- 2 cross-braces (2)
- 1 cross-brace (50)
- 1 cross-brace (318)
- 1 cross-brace (320)
- Warning icon (eye)

Right Inset (End Wall Connection):

- 1 screw (10)
- 1 nut (10)
- 1 cross-brace (50)
- 1 cross-brace (68)
- 1 cross-brace (318)
- Warning icon (eye)

3

- (7) SLIDE TWO EXTRA X 15mm BOLTS INTO EACH SY312 TO ALLOW SY321 ATTACHMENT DURING THE NEXT STAGE.
- (8) ENSURE THAT THE BUILDING IS LEVEL AND SQUARE AND THEN DRILL 2 x 7mm HOLES IN SY002 FOR SY320 USING ITS HOLES AS A TEMPLATE.

Diagram illustrating the corner template assembly. The template is a 90-degree corner piece, labeled **6**. It is secured to the corner of the frame using **15** (screws) and **15** (nuts). The assembly is shown in two views: a top-down view and a side view. The top-down view shows the template being secured with **15** (screws) and **15** (nuts). The side view shows the template being secured with **15** (screws) and **15** (nuts). The assembly is labeled **x2**, indicating two units are required. A callout shows the template being secured with **312** (screws) and **319** (nuts).

Glazing tips for sections 8 & 9:

- The foam (see left) goes longitudinally in three sections on each door stile and all over the greenhouse frame, see overleaf, including the roof corner bars. It never goes horizontally, the glass just sits directly onto the aluminium cills in the sides.
- Remove the white paper on the foam before it gets wet as it is difficult to remove, i.e. it comes off in small pieces.
- Clips (see overleaf) go roughly 1 every 305mm (1') e.g. 610 x 610 pane you would have 2 per side.
- **IMPORTANT:** When glazing we suggest that you start with the 'T' panes in the roof and work outwards as this is the hardest area to access. Add a small blob of silicone (D119 tube supplied) to the bendable overlap clips below the T and F panes to stop them from sliding down towards the gutter. Once all four 'T' panes are in place check that the area does not leak using a watering can where the two ridges '2' & '318' join.

SLIDE VENT INTO RIDGE FROM THE GABLE ENDS

Prior to inserting the roof vents it is a good idea to double check that the roof has no excessive leaks using a watering can. Once they are inserted the roof is harder to access.

OPTIONAL

Attach upper door track 10 to the two bolts left ready in section 3 with nuts (position 10 vertically and push it through the central section between the two glaze bars. Twist 10 so that the slots in the mounting bar are facing upwards). Slide doors into upper track (10) and lower track (18), adjust the height of 10 until the door is running smoothly leaving enough room for the pane of glass above.

10		2530	1
164		465	2

Carefully remove 2 nuts from door rear and attach door stop/handles (see diagrams below). Re attach the nuts!

No 10 x 2"

Please note you will have to drill and screw through your metal base and into your solid foundation at an angle from outside the building.

Push-in Bar Capping (optional) Instructions

to be used in conjunction with your whole sheet toughened glass glazing plan.

PLEASE NOTE: Bar Capping makes the standard band or w-shaped glazing clip redundant!

You are about to begin glazing your greenhouse. It is vital that you take as many safety precautions as possible, especially when handling glass. When glazing the roof we recommend that one individual stands on some ladders inside the greenhouse, while someone else passes the panes up from the outside.

Important, when glazing any structure it is likely to take you several hours to complete the process. You should leave yourself enough time or get yourself help to do the job in one session. Before you begin the process carefully separate your glass into groups of similar panes being very carefully to measure and separate different types as some are quite similar. When moving the glass please be very careful and put down wooden bearers and cardboard to protect the glass from any hard ground or wall surfaces and to help keep the glass clean.

- Glass separators 'Muntins' (610mm black plastic strips) go on your front and rear gables allowing one pane to sit directly on the pane below (see picture to the right), note larger face of the muntin goes towards the centre of the building.

The ideal recommended glazing procedure in our opinion should go as follows;

Start by glazing two roof sections, standing in the doorway looking into the greenhouse the far left roof section and the front right. By doing these two sections first you will be able to establish the squareness of your structure. If you are having difficulty fitting these panes squarely into the structure then you need to recheck that the internal corner to corner measurements of the frame are equal in both directions.

If you are still having difficulty then it may be due to the frame not being perfectly vertical. By moving the ridge backwards and forwards while you are up your supported ladders you will be able to alter the vertical aspect of your structure (you can also place a spirit level against the gables and the sides to assess this). Leave the rest of the roof glazing at this stage and move to glazing the rear and front gables (see next few pages for order and fittings), this will confirm that the structure is vertical.

You can now glaze the sides, and then the rest of the roof. Note, that when you are glazing the roof you should leave glass out of the roof where you wish the roof vents to be situated (these should be fitted along with the doors after glazing).

Please note that the order with which you glaze your building is largely effected by your individual situation, i.e. If your greenhouse is to be situated tight up against a shed and a wall then those sides may need to be glazed first and then the whole building very carefully moved into position using as many helping hands as you can muster.

IMPORTANT!

Bar capping needs to be trimmed to length with a hack-saw and inserted down the full length of each pane.
